

Excerpt from the recommendation letter from Zhang Ling, Vice Chairperson of the University Council:

Proactive and forward-thinking, Luming embarked on an accelerated academic path, taking on advanced coursework typically reserved for higher years, effectively completing nearly all required graduation credits by his junior year. This strategy allowed him to allocate significant time to research and volunteer service, contributing immensely in both realms.

While his GPA may not fully encapsulate his talents, Luming has shown a consistent and remarkable improvement in his academic performance, with the only dip occurring during the pandemic-affected semester. His achievement of top marks in course projects, such as deep learning, artificial intelligence, algorithm design and analysis, demonstrates his strong programming and innovative capabilities. His algorithmic and mathematical prowess, particularly in deep learning and algorithm courses, combined with excellent literature review and adaptability to new knowledge, have been highly praised. Professor Yao Xin, Dean of the Computer Science Department, lauds Luming for his proactive learning, exploration abilities, motivation, and deep commitment to research.
